

Rain, Rain, Go Away..... But Where Does it Go?

Excess surface water, in Fairfield County, flows through various tributaries making its way into 1 of 3 principal waterways; Hocking River, Muskingum River, or Scioto River.

Each of these 3 Rivers flow into the Ohio River, which in turn flows into the Mississippi River. Ending their journey as they flow into the Gulf of Mexico.

Next time it rains, think of the long journey those little rain drops take as they make their way to the ocean.

Average Outflow:
6,201,749 Gallons
per Second

Can you find the 6 sailboats hidden in the map?

Average Outflow as of April 2023 - USGS
(7.481 gallons per 1 cubic foot)
